

⁴⁰Ca(⁴⁰Ca,α2pγ) 2005Va30

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Balraj Singh, Ameenah R. Farhan		NDS 107, 1923 (2006)	30-Apr-2006

- 2005Va30:** E(⁴⁰Ca)=185 MeV. Measured Eγ, Iγ, γγ using EUROBALL III array of 26 ‘Clover’ and 15 ‘Cluster’ composite Compton-suppressed HPGe detectors. Particles detected with 4π ISIS array consisting of 40 silicon ΔE-E telescopes, neutrons detected with 50 liquid scintillator detectors covering forward 1π section of EUROBALL array.
- 2005Va30:** E(⁴⁰Ca)=165 MeV. Measured Eγ, Iγ, γγ, lifetimes by Centroid-shift Doppler-attenuation method using Gammasphere array of 99 Compton-suppressed HPGe detectors. Particles detected with CsI(Tl) MICROBALL array consisting of 95 detectors.
- 2005Go43:** E=147 MeV. Measured Eγ, Iγ, γγ, lifetimes by recoil-distance Doppler-shift (RDDS) method using GASP array of 32 Compton-suppressed HPGe detectors and inner ball of BGO scintillators. **2005Go43** present data for GS band up to 10⁺.
- 2000A102:** E=160 MeV. Measured level lifetimes by DSA METHOD. Data presented for g.s. band up to 22⁺ and for 5⁻ band up to 21⁻.
- 1991He02:** E=125, 140 MeV. Measured γ, γγ, T_{1/2} by (DSA) method.

⁷⁴Kr Levels

The transition quadrupole moments deduced from lifetime measurements reveal only a modest decrease with at highest spins. This indicates non-termination of rotational bands at maximum spins.

E(level) [†]	J ^π @	T _{1/2} [‡]	Comments

[†] From least-squares fit to E_γ 's, assuming $\Delta(E_\gamma)=0.5$ keV uncertainty when E_γ quoted to nearest keV, 1 keV otherwise; $\chi^2=1.1$.

[‡] From DSA method (2000A102), unless otherwise stated.

From RDDS method (2005Go43).

@ As proposed by 2005Va30. The assignments are consistent with those in 'Adopted Levels', except that many are given in parentheses there due to lack of strong supporting arguments.

& Band(A): g.s. band. $Q(\text{transition})(\text{top of the band})=2.1$ (2005Va30).

^a Band(B): 4⁻ band, $\alpha=0$. $Q(\text{transition})(\text{top of the band})=2.4$ (2005Va30).

^b Band(b): 5⁻ band, $\alpha=1$. $Q(\text{transition})(\text{top of the band})=2.3$ (2005Va30).
