**1965Li10:** ( $\text{d},\text{d}'$ ),  $E=15 \text{ MeV}$ .  $\sigma(35^\circ)/\sigma(47^\circ)$  ratio for parity assignment which in several cases disagree with assignment from other reactions.

(pol  $\text{d},\text{d}'$ ): [1987Nu03](#) (theoretical), [1981Nu01](#), [1980Nu01](#), [1980Bu02](#), [1978Oh02](#), [1977Nu02](#), [1981ShZZ](#). These studies discuss second-order process, two-step mechanism, optical model parameters, analyzing powers, isotopic dependence, and shell closure effects in (pol  $\text{d},\text{d}'$ ) reaction.
