

$^{58}\text{Ni}(^{30}\text{Si},\alpha 2\text{pn}\gamma)$ 1996Sm07

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	M. Shamsuzzoha Basunia		NDS 199,271 (2025)	1-Sep-2024

Additional information 1.

1996Sm07: $^{58}\text{Ni}(^{30}\text{Si},\alpha 2\text{pn}\gamma)$, E=134 MeV; EUROGAM phase 2 array (30 coaxial Ge and 24 Clover detectors, all BGO shielded); measured $E\gamma$, $I\gamma$, 2-fold and higher γ coin, DCO ratios.

[†] Mean of authors' values.

[‡] Authors' suggested values; based on deduced band structure and measured DCO ratios, except where otherwise noted.

[#] Level may be isomeric, based on sudden cut off for cascade I_γ above the 1287γ which deexcites this level (1996Sm07).

[@] Band(A): Possible π=-, α=-1/2, 5-quasiparticle band. Feeds into 5/2[303] α=-1/2 band. No signature partner is observed.

Postulated to contain the simultaneous alignment of a pair of quasineutrons and a pair of quasiprotons (1996Sm07), resulting in increased deformation.

[&] Band(b): α=-1/2, 3-quasiparticle Eab band. (ν 5/2[303]) + aligned pair of quasiprotons.

^a Band(B): α=+1/2, 3-quasiparticle Fab band. (ν 5/2[303]) + aligned pair of quasiprotons.

^b Band(C): α=-1/2 (ν 5/2[422])(π g_{9/2})² band. Yrast following crossing of 1-quasineutron band at ħω≈0.50 MeV.

^c Band(d): (ν 5/2[422]), α=-1/2 decoupled yrast band.

^d Band(D): (ν 5/2[422]), α=+1/2 decoupled yrast band.

^e Band(e): (ν 1/2[431]), α=-1/2 band. Intruder state from d_{5/2} subshell.

^f Band(E): (ν 1/2[431]), α=+1/2 band. Intruder state from d_{5/2} subshell.

^g Band(F): (ν 5/2[303]), α=+1/2 band.

^h Band(f): (ν 5/2[303]), α=-1/2 band.

ⁱ Band(g): (ν 1/2[301]), α=-1/2 band.

^j Band(G): (ν 1/2[301]), α=+1/2 band.

† From 1996Sm07, except as noted; ΔE=0.1 to 4 keV.

‡ Relative to I(960γ)=100.0 5 (1996Sm07). For E_γ below ≈250 keV, efficiency for γγ coin events could not be determined, so I_γ is unavailable for those transitions.

From measured DCO ratio; values expected for pure stretched Q and stretched D transitions are, respectively, 1.0 and 1.7.

@ Coincident with gammas in the 1/2[431], α=-1/2 band, but not incorporated into band because a self-consistent level scheme could not be established (1996Sm07).

& Placement of transition in the level scheme is uncertain.

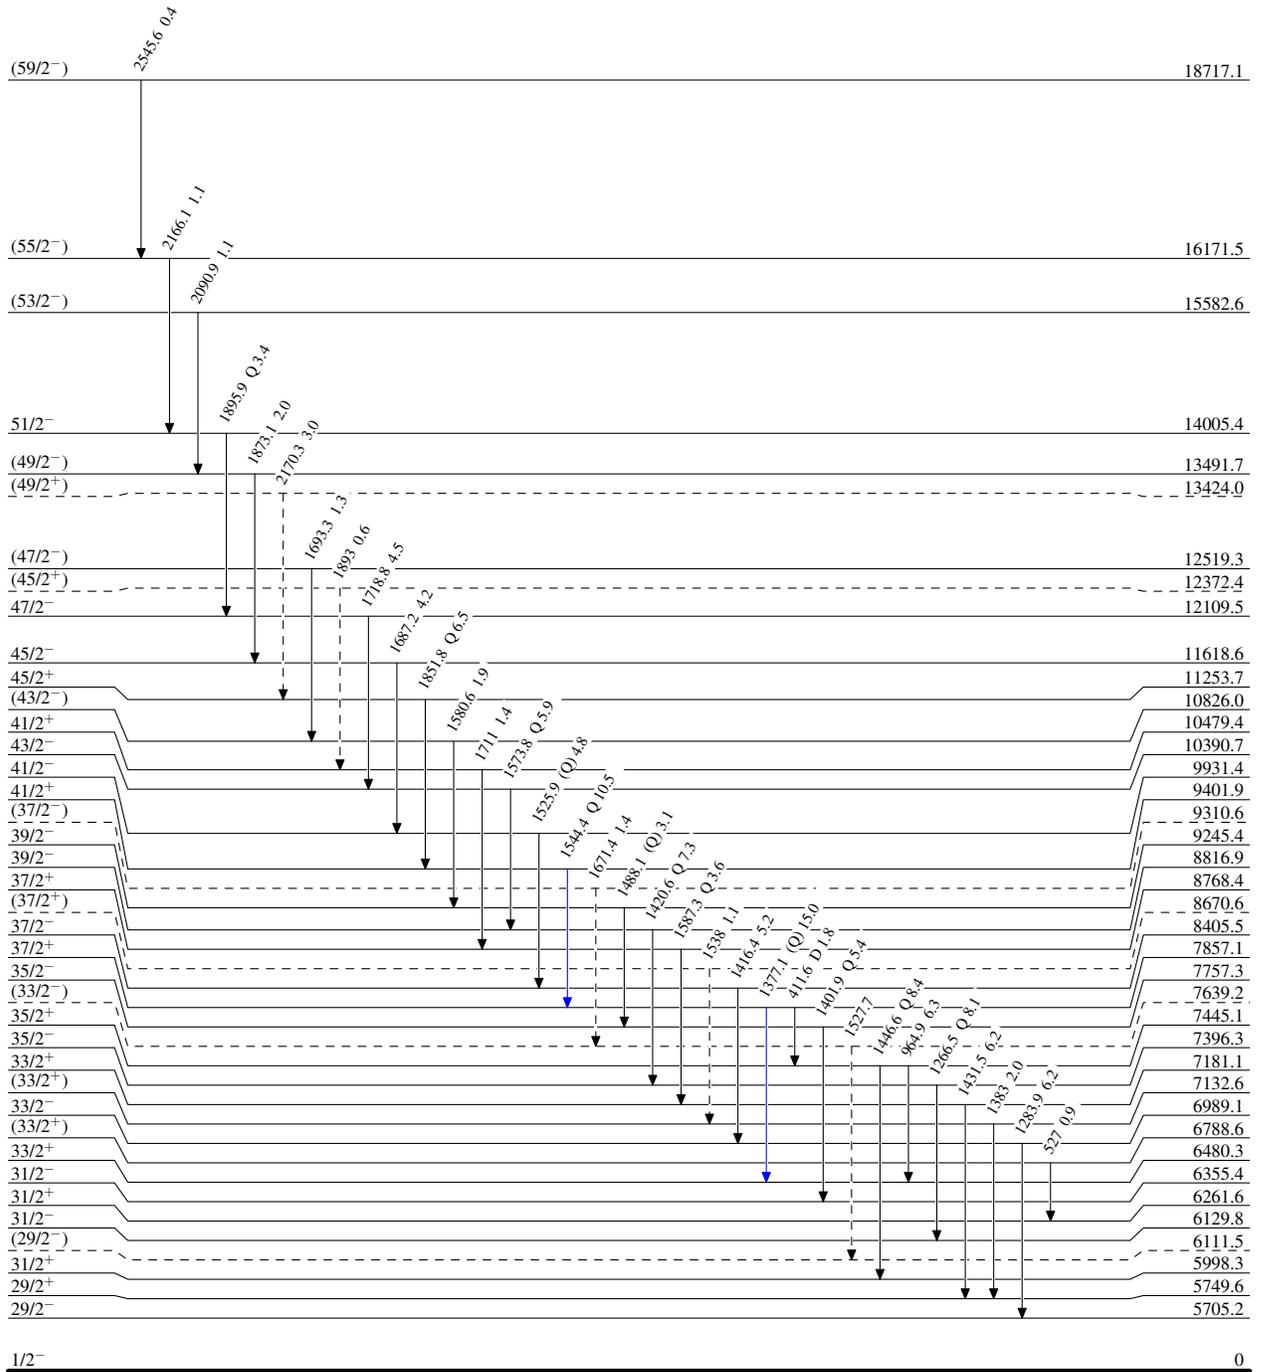

^x γ ray not placed in level scheme.
