1973Ba56: E(p)=31 MeV. FWHM=18 keV. Measured ^3H spectra and $\sigma(\theta)$ using magnetic spectrograph. DWBA analysis. 82.2% enriched target.

1973Mo11: E(p)=49.5 MeV. FWHM=75 keV. Measured ^3H spectra, cross sections and $\sigma(\theta)$ using magnetic spectrograph. DWBA analysis.

Peak cross sections listed here are from [1973Mo11](#).

[†] From [1973Ba56](#) for levels up to 3200 keV. Above this energy levels are reported only by [1973Mo11](#).

[‡] From DWBA analysis of $\sigma(\theta)$ data from [1973Ba56](#) up to 3200 keV. Above this energy the assignments are from [1973Mo11](#).

[#] $\sigma(\theta)$ distributions not shown. is adopted since [1973Mo11](#) do not resolve the neighboring level.
