 ^{88}Sr Levels

1978Ba60: E=11 MeV. Measured $\sigma(\theta)$ ($\theta=15^\circ$ – 150°) for 1840 level with time-of-flight technique using a shielded NE224 liquid scintillator (FWHM=290 keV); DWBA analysis.

1980Fi08: Same experimental conditions as **1978Ba60**. Measured $\sigma(\theta)$ of 2730 level; DWBA analysis.

E(level)	L^{\dagger}	β_L^{\dagger}
0		
1.84×10^3	2	0.133 7
2.73×10^3	3	0.178 $^{+0.9}_{-0.9}$

† From DWBA analysis.

‡ Deduced by the evaluators from the deformation length ($\delta=\beta_L R=0.95$ 5) using $R=1.2 A^{1/3}$ (fm).
