$E({}^3\text{He})=23$ MeV. Measured $\sigma(\theta)$ using split-pole magnetic spectrometer and photographic emulsions (FWHM=20 keV); DWBA analysis.

[†] From (${}^3\text{He},\text{d}$), (α,t), (${}^3\text{He},\alpha$), and (${}^3\text{He},\text{t}$) measurements of [1971Co20](#).

[‡] From coupled-channels calculations giving good fit of angular distributions ([1973Co22](#)). Single-step DWBA analysis does not reproduce the distribution shapes ([1971Co20](#)).

[#] Target thickness not well determined in [1971Co20](#), thus, cross sections are only accurate to within a factor of 2.
