<sup>†</sup> From 1982Ya05, unless otherwise stated. Energies of 11 levels available from 1969To03 are in agreement with those from 1982Ya05. Energy uncertainty is 15 keV (1969To03).

<sup>‡</sup> From DWBA analysis of  $\sigma(\theta)$  (1982Ya05). For first three excited states, values are also from 1987Me10.

(1982Ya05). Deformation parameter  $\beta_L' = [d\sigma/d\Omega(\text{exp})/(d\sigma/d\Omega(\text{DWBA}))]^{1/2}$  is given under comments for each level.  
&  $[(\beta_L'(2570)^2 + \beta_L'(2620)^2)]^{1/2} = 0.06$  1.

<sup>a</sup>  $[(\beta_L'(3065)^2 + \beta_L'(3105)^2 + \beta_L'(3137)^2)]^{1/2} = 0.050$  6.

<sup>b</sup> Assigned  $J^\pi$  is consistent with Hauser-Feshbach analysis (1969To03).

<sup>c</sup> Agreement with calculated cross section is better for  $J=5/2$  (1984Bu28).

<sup>d</sup> Unresolved doublet or triplet (1982Ya05).
