

$^{238}\text{U}(^{48}\text{Ca},\text{X}\gamma)$ 2009Pa20

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	Coral M. Baglin	NDS 114, 1293 (2013)	1-Sep-2013

Includes $^{238}\text{U}(^{64}\text{Ni},\text{X}\gamma)$ and $^{208}\text{Pb}(^{48}\text{Ca},\text{X}\gamma)$ deep inelastic reactions.

2009Pa20: $^{208}\text{Pb}(^{48}\text{Ca},\text{X}\gamma)$, E=305 MeV, $^{238}\text{U}(^{48}\text{Ca},\text{X}\gamma)$, E=330 MeV and $^{238}\text{U}(^{64}\text{Ni},\text{X}\gamma)$, E=430 MeV. All experiments used 50 mg/cm² targets and beams from the ATLAS accelerator at Argonne. Measured E γ , I γ , $\gamma\gamma$ coin, $\gamma\gamma(\theta)$ with Gammasphere array (100 Compton-suppressed HPGe detectors).

Level scheme supported by coincidence data and systematics for odd-A Rb isotopes.

^{91}Rb Levels

E(level) [†]	J π [‡]	T _{1/2}	Comments
0.0	3/2 ⁻		
108.9 10	5/2 ⁻		
721.9 13			
1134.2 @ 13	9/2 ⁺ #	16.6 ns 6	T _{1/2} : from Adopted Levels.
1840.9 @ 13	13/2 ⁺ #		
2979.3 @ 17	17/2 ⁺ #		
3574.6 17			
3878.7 17			
4098.2 @ 17	(21/2 ⁺)#		
4572.0 17			
5299.5 17			
6238.9 18			

[†] From least-squares fit to E γ , assigning 1 keV uncertainty to data for which authors did not state an uncertainty.

[‡] Values suggested by 2009Pa20; supported by γ multipolarity for 3 transitions, deduced band structure and systematics of yrast levels in neighboring Rb isotopes.

Based on multiplicities deduced from measured $\gamma\gamma(\theta)$.

@ Band(A): π g_{9/2}, $\alpha=+1/2$ band.

$\gamma(^{91}\text{Rb})$

The assignment of γ rays to ^{91}Rb is based on coincidence spectra obtained with double gates set on transitions below the 9/2⁺ isomer at 1134.3 keV and confirmed by examination of delayed coincidences across the isomer.

E γ [†]	I γ [†]	E _i (level)	J π _i	E _f	J π _f	Mult. [‡]	Comments
