[†] From 1976Bl11, except for levels above 4325; the latter are from 1968Ba31. 1976Bl11 estimate their uncertainties range from 4 keV for the lower energy levels to 10 keV for the levels at 4 MeV. Individual uncertainties assigned by the evaluator.

[‡] From comparison of $\sigma(\theta)$ with DWBA predictions; from 1976Bl11 for E(level) \leq 4325, from 1968Ba31 for E>4325. Note that

some of the latter are in conflict with other experiments.

From DWBA analysis ([1976Bl11](#)). See [1968Ba31](#) for C²S deduced from their data.
