[&] Stretched.

^a From $\gamma(\theta)$ and γ -polarization.

^b The placement of the 386 γ is supported by most of the coincidence data, but is in contradiction with the observed coincidence with the 348 γ ([1972Me03](#)) and the 152 γ ([1971Le20](#)). Probable doublet.

^c Composite peak.

^d Multiply placed.

^e Multiply placed with undivided intensity.

^f Placement of transition in the level scheme is uncertain.

^x γ ray not placed in level scheme.
