[†] Weighted averages of all available data. $\Delta E=1$ keV was assumed for γ rays reported without uncertainty.

[‡] Weighted averages of all available data.

From ⁹⁹Pd ϵ decay.

@ From $\gamma(\theta)$ in (¹⁶O, α 2n γ) and level scheme.

& From $\alpha(\text{K})_{\text{exp}}$ in β^+ decay.

^a As given by 2014Ku20, unless stated otherwise, on basis of DCO and IPDCO measurements. Most of the assignments, however, in 2014Ku20 seem from ΔJ^π assignments, not necessarily from experimental data in support of these multipolarity assignments.

^b Additional information 1.

^c If No value given it was assumed $\delta=1.00$ for E2/M1, $\delta=1.00$ for E3/M2 and $\delta=0.10$ for the other multiplicities.

^d Multiply placed with intensity suitably divided.

^e Placement of transition in the level scheme is uncertain.
