

Compilation of Direct Measurements of Spins of ground states and Long-lived isomers

Allison MacDonald, Babak Karamy, Balraj Singh
McMaster University

USNDP: Nov 4–6, 2009

Motivation

- ▶ Previous published compilation: *Nuclear Spins and Moments* by G.H. Fuller J. Phys. Chem. Ref. Data 5, 835 (1976)
1976Fu06 (literature quoted up to 1974)
Earlier compilation 1969Fu11: G.H. Fuller and V.W. Cohen: NDT 5, 433
- ▶ Direct measurement of spin is a strong argument for JPI assignments in ENSDF evaluations
- ▶ “2. Spin determinations by such techniques as atomic-beam resonance, paramagnetic resonance, electron-spin resonance, and optical spectroscopy give correct values.”
- ▶ With radioactive ion-beam facilities, direct measurement of nuclear spin may, once again, become an active area of research.

Methods of Direct Measurement

- ▶ Hyperfine structure: optical spectroscopy or collinear laser spectroscopy.
 - ▶ Nuclear magnetic resonance
 - ▶ Atomic and molecular beams
 - ▶ Electron scattering
 - ▶ β -asymmetry from oriented/polarized nuclei
 - ▶ Microwave spectroscopy
 - ▶ Optical pumping
 - ▶ Electron paramagnetic resonance
 - ▶ Spin exchange
- 

Literature and Procedure

Compilation done using the following sources and sequence for each nuclide:

- ▶ *Nuclear Spins and Moments*, H.G. Fuller:
J. Phys. Chem. Ref. Data 5, 835 (1976); NDT 5, 433 (1969)
 - ▶ *The Table of Isotopes, Seventh Edition*,
C.M. Lederer et al. (1978)
 - ▶ *ENSDF database*.
 - ▶ *NSR database*
 - ▶ *Current publications*
-

Compilation of Direct Nuclear Spin Measurements of Ground States and Long-Lived Isomers

Allison MacDonald, Babak Karamy, Balraj Singh (PhD)

Department of Physics & Astronomy, McMaster University, 1280 Main St. West,
Hamilton, ON L8S 4L8

Abstract

We present a compilation of nuclear ground and isomeric state spins measured by direct methods. To our knowledge, this is the first such compilation since 1976, when the compilation *Nuclear Spins and Moments* (J. Chem. Phys. Ref. Data 5, 835) by G. H. Fuller was published. We anticipate that the area of direct spin measurement will continue to expand and we will update this table as it does so.

Introduction

The direct measurement of nuclear spins is cited as the primary argument for spin assignment to ground states and isomers by the National Nuclear Data Center: “Spin determinations by such techniques as atomic-beam resonance, paramagnetic resonance, electron-spin resonance, and optical spectroscopy give correct values.” (Nuclear Data Sheets Vol. 110, No. 1, p. iv).

Our motivation in compiling this data was driven by the observation that there have been several direct measurements effected since the publication of *Nuclear Spins and Moments*, which tabulates nuclear spins measured up to 1974. Thus, to our knowledge, there has been no new compilation of measured nuclear spins for nearly 35 years.

Additionally, it is our strong belief that interest in the area of nuclear spins and their measurement will increase in the foreseeable future due to present technologies which allow the production of previously unattainable radioactive ion beams. For example, the paper entitled *Nuclear spins and magnetic moments of $^{71,73,75}\text{Cu}$: Inversion of π $p_{3/2}$ and $f_{5/2}$ levels in ^{75}Cu* by K.T. Flanagan et al. was accepted

for publication in Physical Review Letters on September 2, 2009. Furthermore, it is our intent to continuously update this table with new spin measurements as they are published.

In the table below, we present nuclides for which spins were directly measured. The level energies of long-lived isomers for which spins were measured are also given. Measured spin values are given, where parentheses and/or question marks are reproduced from the source from which the reference was taken, and indicate an uncertain value. The method of spin measurement is given, along with the citation and NSR keynumber of the reference from which the measurement was taken. References prior to 1976 are taken primarily from Fuller et al. The Table of Isotopes, Seventh Edition by Edgardo Browne et al, published in 1978 was also of great help. Finally more recent references were found using the Nuclear Science References (NSR) and the Evaluated Nuclear Structure Data File (ENSDF) databases maintained by the National Nuclear Data Center, Brookhaven National Laboratory. Parities are taken from the ENSDF database.

Table1: Directly measured nuclear spins compilation. The symbol ~ indicates that no hyperfine structure was observed by the reference.
